

空軍でも認められたLASIK

The screenshot shows the Air Force Medical Service website. The main headline is "US Military Pilots Can Have Lasik" with a sub-headline "Previously restricted to PRK, pilots may now have All-Laser Lasik." The article text states: "WASHINGTON, May 21, 2007 -- Air Force officials have changed the policy to allow people applying for aviation and aviation-related jobs to have had Lasik surgery. The change became effective May 21. The change also removes the altitude and high-performance aircraft restrictions for people who have had LASIK." The article also mentions that the decision was based on studies showing little effect on LASIK-treated eyes during aircraft ejection or high altitude exposure. A sidebar on the left contains navigation links like "KOB.com NEW MEXICO", "How to Pick A Lasik Doctor", and "Ask Lasik Expert". The right side of the page features a "Welcome" message and a "US Air Force Refractive Surgery Program" section with various informational links.

6/30/2007 - WASHINGTON (AFPN) -- Air Force officials have changed the policy to allow people applying for aviation and aviation-related jobs to have had LASIK surgery. The change became effective May 21. The change also removes the altitude and high-performance aircraft restrictions for people who have had LASIK.
